

2021

BOTANY — HONOURS

Paper : DSE-A-4

(Stress Biology)

Full Marks : 50

The figures in the margin indicate full marks.

*Candidates are required to give their answers in their own words
as far as practicable.*

1. Answer **any five** of the following in few words : 2×5
 - (a) Differentiate acclimation and adaptation in relation to stress.
 - (b) Mention one amino acid and one sugar alcohol used by plants as compatible solutes.
 - (c) What are the differences between stress avoidance and stress tolerance response?
 - (d) What is physiologically dry soil?
 - (e) What is aerenchyma tissue?
 - (f) What is singlet oxygen?
 - (g) Mention any two major non-enzymatic antioxidants in plants.
 - (h) What do you mean by PR protein? Mention the name of one PR protein.
 2. Answer **any two** of the following : 5×2
 - (a) Discuss the role of jasmonic acid in disease resistance.
 - (b) How compatible solutes provide resistance during salinity stress in plants?
 - (c) Explain the G protein activation mechanism in plant signalling.
 3. Answer **any three** of the following :
 - (a) Discuss developmental and physiological parameters plants develop against abiotic stress. 5+5
 - (b) Discuss the mechanism of ROS production and the role of ROS scavenging enzymes in plants. 5+5
 - (c) What are the impacts on plants, exposed to abiotic stresses in relation to root-shoot ratios and aerenchyma development? Differentiate freezing and chilling stresses in plants. (4+4)+2
 - (d) Describe the role of phospholipids in signalling during abiotic stress conditions in plants. 10
 - (e) Explain the role of salicylic acid in eliciting Systemic Acquired Resistance in plants. Discuss various pathogenesis-related proteins in plants and their functions. 5+5
-
